FCC Notices

FCC Part 15 Information to the User
Changes or modifications not expressly approved by Interactive Technologies, Inc. can void the user’s authority to operate the equipment.

FCC Part 15 Class A
This equipment has been tested and found to comply with the limits for a class A digital device, pursuant to part 15 of the FCC rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment.

This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case users will be required to correct the interference at their own expense.

FCC Part 15 Class B
This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against interference in a residential installation.

This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation.

If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the affected equipment and the panel receiver to separate outlets, on different branch circuits.
- Consult the dealer or an experienced radio/TV technician for help.

FCC Part 68
This equipment complies with Part 68 of the FCC Rules. Located on this equipment is a label that contains, among other information, the FCC registration number and the ringer equivalence number (REN) for this equipment. If requested, this information must be provided to the telephone company.

The REN is used to determine the maximum number of devices that may be connected to your telephone line. In most areas, the sum of all device RENs should not exceed five (5.0).

If this equipment causes harm to the telephone network, the telephone company may temporarily disconnect your service. If possible, you will be notified in advance. When advance notice is not practical, you will be notified as soon as possible. You will also be advised of your right to file a complaint with the FCC.

Your telephone company may make changes in its facilities, equipment, operations, or procedures that could affect the proper operation of your equipment. You will be given advanced notice in order to maintain uninterrupted service.

If you experience trouble with this equipment, please contact the company that installed the equipment for service and repair information. The telephone company may ask you to disconnect this equipment from the network until the problem has been corrected or you are sure that the equipment is not malfunctioning.

This equipment may not be used on coin service provided by the telephone company. Connection to party lines is subject to state tariffs.

Certification Number: B4Z-USA-46042-AL-T

REN: .1B

Introduction to Your Security System

Your security system uses wireless technology to warn your family about intrusion, carbon monoxide and fire. It may also be used to control lights and appliances within your home. The system has the capabilities of communicating with a central monitoring station and sending messages to a numeric pager.

This manual describes how to operate your system. It will guide you through programming instructions for system features as well as basic arming and disarming commands for the system.

Security System Components

The security system uses devices called sensors that use radio waves to communicate alarms to the Control Panel (panel).

The system is supervised, meaning that the panel checks the status of each sensor to detect problems. If the panel detects trouble it will notify you with beeps and indicator lights on the panel itself.

Your security system installation may include any of the following devices:

Control Panel

The Control Panel is used to operate and program your security system. It communicates to you through voice messages, beeps, and by lighting or flashing buttons. The panel can communicate to a central monitoring station, numeric pager, or both.

Touchpads

Remote Handheld Touchpads are used to control the security system primarily from within the home.

Keychain Touchpads are used to control the security system from within or near the outside of your home.

Sensors

Indoor Motion Sensors detect motion in a protected indoor area. When motion is detected the panel may respond by sounding chimes or an alarm.

Outdoor Motion Sensors detect motion in a protected outdoor area. When motion is detected, the system may respond by sounding chimes or turning on outside lights. These sensors are not used for intrusion detection.

Door/Window Sensors detect the opening of a door or window.

Smoke Sensors detect smoke and a significant rise in temperature. They have a built in siren that sounds when smoke or a significant rise in temperature is detected.

Freeze Sensors detect furnace failure. If the inside temperature drops below 41°F, the sensor will notify the panel. The sensor will send a restore signal to the panel when the temperature rises to 50°F.

Carbon Monoxide Sensors detect carbon monoxide. They have a built in siren that sounds when carbon monoxide is detected.

Modules

Appliance Modules can be programmed to turn appliances or fluorescent lights on and off.

Lamp Modules can be programmed to turn non-fluorescent lights on and off.

Universal Modules are primarily used for controlling devices other than appliances and lamps. Check with your installer for other applications.

Audio Verification Module (AVM) is primarily used by the central monitoring station to monitor sounds and verbally communicate with a person inside the home. This feature is similar to a speaker phone feature on a phone.

How You Communicate to Your System

Sending commands or instructing your security system is done through key presses on the panel, touchpads, or through the use of a remote telephone.

Control Panel

You can enter commands for your security system through simple key presses on the panel. Depending on how your system is programmed, you may need to enter an access code for certain commands. An access code is a numeric code that allows authorization to operate your security system.

Note

The Master Access Code default is 1-2-3-4 when the security system is shipped from the factory. You should change your code after your system is installed (see “Programming Your System”).
Remote Handheld Touchpad
This touchpad gives you the option to enter commands from any room in your house. You can enter commands through simple key presses on the touchpad.

Keychain Touchpad
Keychain Touchpads are handy for simple arming and disarming functions. They are portable and can be carried off-site in a purse or pocket.

Telephone
Touchtone telephones can be used to communicate with your system while you are off-site. Ask your installer if you have this feature.

How to Use Your Control Panel
The panel interface consists of four rows of buttons.

- HOME SECURITY
- CODE
- HOME CONTROL
- EMERGENCY

Note
It may be necessary to enter an access code to arm your system. Check with your installer to see if this feature is enabled.

HOME SECURITY

The Home Security buttons are used to arm and disarm doors, windows, and motion sensors in your system. The System Status button is used to give information on system activity.

Arm
Turn on intrusion/burglary protection for your system. You can arm door/window sensors, motion sensors or both depending on the buttons you press.

Disarm
Turn off intrusion/burglary protection for your system. Only intrusion/burglary sensors such as doors/windows and motion are disarmed. Environmental sensors, such as smoke and carbon monoxide stay armed at all times.

System Status
Press to hear information about your system. If the button is lit, there is a problem with the system. If the button is blinking, an alarm has occurred. Press the button to hear what is wrong with the system. (See “Status Beeps”.)

Exit Delay
Exit Delay is the amount of time the system gives you to exit the home before the system is armed (between 5 and 254 seconds). This is programmed by the installer. When you arm you will hear beeps during the exit delay (see the table “Status Beeps” of this manual to determine the meaning of panel/system beeps).

Your Exit Delay is set for ___ seconds.

Entry Delay
Entry Delay is the amount of time the system gives you to disarm the system after entering the home. This is programmed by the installer. When you enter your home you will hear beeps during the entry delay (see the table “Status Beeps” of this manual to determine the meaning of panel/system beeps).

Your Entry Delay is set for ___ seconds.

Quick Exit
The Quick Exit feature is used when someone wants to briefly leave while the home is still armed (i.e. get the newspaper). This feature needs to be enabled by your installer. When you press the Disarm button the panel will announce exit time on. This will allow a designated exit door to be open for up to 2 minutes without triggering an alarm.

Note
The designated door may be opened and closed once. If you close the designated door behind you when you exit, you will have to disarm the system upon reentering. Leave the designated door open while using the Quick Exit feature.

Latchkey
Latchkey is used to notify parents, via a numeric pager, if children do not arrive home at a predetermined time and disarm the system. For example, you set the Latchkey time for 3:00 pm. If the system isn’t disarmed by that time a message is sent to your numeric pager (see “Numeric Pager”).

Subdisarm
If your system includes 24-hour protection sensors on items such as gun or jewelry cases, you must subdisarm the panel before accessing these areas to avoid causing an alarm.

Arming Your System with Doors & Windows Closed
1. Close all doors and windows.
2. Press Arm Doors & Windows button.
3. Enter Access Code (if needed).

Panel announces, Doors and windows on, Arm Doors & Windows light will be lit and the exit delay will begin.

Arming Your System with Doors or Windows Open
1. Close all doors and windows except the ones you wish to remain open.
2. Press **Arm Doors & Windows** button.
3. Enter Access Code (if needed).

Panel announces any protected doors or windows that are open. Any sensors that are open when the system is armed will be bypassed after exit. **Arm Doors & Windows** light will be lit and the exit delay will begin.

**Note**
Any sensors that are bypassed by the system will NOT be protecting your home.

**Arming Your System with No Entry Delay**

**Note**
No Entry Delay can be used in two ways. You can use this feature when you’re staying at home, after you’ve armed the system (i.e. when you’re asleep). Second, you can use this when you’re away from your home. To avoid causing an alarm, you must disarm the system with a remote handheld touchpad or keychain before entering your home. Check with your installer to find out how this option is programmed.

1. Close all doors and windows.
2. Press **Arm Doors & Windows** button twice.
3. Enter Access Code (if needed).

Panel announces, **Doors and windows on, no entry delay.**
**Arm Doors & Windows** light will blink and the exit delay will begin.

**Arm Motion Sensors**

1. Press **Arm Motion Sensors** button once.
2. Enter access code (if needed).

Panel announces, **Motions on.**
**Arm Motion Sensors** light will be lit and the exit delay will begin.

**Note**
This feature is most likely used when there is no one on the premises.

**Activate Latchkey Feature**

1. Press the **Arm Motion Sensors** button twice.
2. Enter Access Code (if needed).

Panel announces, **Motions on, Latchkey on.**
**Arm Motion Sensors** light will blink and the exit delay will begin.

**Disarming Your System**

1. Upon reentering your home the entry delay will begin.
2. Status beeps will sound.
3. Enter your access code using the **Code** buttons.

Panel announces, **System disarmed** and the **Disarm** light will be lit.

**WARNING!**
If you enter your home and you hear alarm sirens, or if controlled lights that should be off are on, an intruder may be inside or another emergency may have occurred. Leave immediately and call for help.

**Subdisarm Your System**

1. Enter your Master Access Code while the system is disarmed.

Panel announces, **System disarmed.**
**Disarm** button light blinks and the system is subdisarmed. When you’ve finished accessing the protected areas, press the **Disarm** button again. Panel announces, **System disarmed.**
**Disarm** button light stops blinking. System is in Disarm mode.

**If You Never Leave After Arming**

Your panel can be programmed to recognize that you never left the premises. If you press the **Arm Doors & Windows** button and the **Arm Motion Sensors** button but don’t exit before the exit delay expires, the panel will not arm the motion sensors. Check with your installer to find out if this feature is enabled for your panel.

**If You Forgot Something After Arming**

Your panel can be programmed to recognize when you leave the premises then quickly reenter. The panel will restart the exit delay to give you time to collect your things and leave again. You must leave before the exit delay expires or disarm the system. Ask your installer if this feature is enabled for your system.

**Arming When the Panel Battery is Low**

Your panel may be programmed so that you cannot arm the system if the panel battery is low. Ask your installer.

**CODE**

There are 5 **CODE** buttons located in the second row of the panel. Each button represents 2 numbers. The left **CODE** button is 1/2, which means that this button is pressed when entering either 1 or 2. For example, if your access code is 1-2-3-4 you must press the 1/2 button twice and the 3/4 button twice to enter that access code. Access code lengths need to be between 3 and 6 digits.
HOME CONTROL

The Home Control buttons are used to monitor activity within and around the home. They are not used for intrusion protection. If any of the Home Control buttons are pressed and a sensor or module is not associated (programmed) with this feature the panel will announce, _Function not available._

Chime Doors
Chime Doors is used to signal the panel (chime) when a protected door is opened while the system is disarmed. The panel will chime twice and announce (see Option 41) the door that has been tripped. This is a nice feature to use if you’re busy in one part of your home and you want to know when family members are going in and out of your home.

Turn Chime Doors on:
1. System must be disarmed. Press **Chime Doors** button.

Panel will chime twice and announce, _Chime on. Chime Doors_ button will be lit.

Turn Chime Doors off:
1. Press **Chime Doors** button

Panel will chime twice and announce, _Chime off. Chime Doors_ button no longer lit

Chime Special Motion
This is used to detect movement within a specific area. These Motion Sensors are not used for intrusion protection. The panel will chime three times and announce (see Option 41) the sensor that has been tripped. Use the same panel procedures as **Chime Doors**, except, with the **Chime Special Motion** button.

If you have Motion Sensors located in areas such as in a patio area or at the front door and you want to know when someone is approaching these areas, you would use this feature.

Time Activated Lights
Turn on designated lights (with Lamp Modules) at a specific time. You can program what time the lights go on and off (see Programming - Light Control).

Turn Time Activated Lights on:
1. Press **Time Lights** button.

Panel will announce, _time activated light on. Time Lights_ button will be lit.

Turn Time Activated Lights off:
1. Press **Time Lights** button.

Panel will announce, _time activated light off. Time Lights_ button no longer lit.

Sensor Activated Lights
Turn on designated lights (with Lamp Modules) when a sensor is tripped. You can program lockout times when Sensor Activated Lights won’t be active (see Programming Options 36 and 37).

Turn Sensor Activated Lights On:
1. System must be disarmed. Press **Sensor Lights** button.

Panel will announce, _sensor activated lights on. Sensor Lights_ button will be lit.

Turn Sensor Activated Lights Off:
1. Press **Sensor Lights** button.

Panel will announce, _sensor activated lights off. Sensor Lights_ button no longer lit.

Lights On
Turns on lights that are controlled by Lamp Modules.

1. Press **Lights On** button twice.

Panel announce, _Lights on. Lights On_ button will NOT be lit.

Lights Off
Turns off lights that are controlled by Lamp Modules.

1. Press **Lights Off** button twice.

Panel announces, _Lights off. Lights Off_ button will NOT be lit.

Silent Exit
This feature silences the status beeps that accompany the exit delay (see Status Beeps). Press **Chime Doors** after you arm the system to silence status beeps. The panel will still beep at the beginning and end of the exit delay.

EMERGENCY
Press FIRE, POLICE, or AUX for 2 seconds (or press twice quickly) to call the central monitoring station and notify them of a non-medical call for help.

How Your System Communicates to You
Your system responds to you through the use of panel voice messages, status beeps, alarms, panel indicator lights, and to a numeric pager if programmed.

Panel Voice Messages
When you press the buttons on the panel or the touchpads, the panel responds with voice messages. Panel voice can be enabled or disabled (see “Options”).

These messages may respond with system information or prompt you to take further action. For example, if you want to disarm the system and you press the DISARM button, the panel responds by announcing, “Please enter your access code.”

If you press a button and the feature has not been programmed, the panel voice will respond with “Function not available.” An example of this would be pressing CHIME Special Motion button when you have no motion sensors in your system.

Note
The panel will not give voice messages during an AVM session. Talk to your security system dealer to see if your panel has the AVM option.

Status Beeps
Status beeps are used to indicate key presses, status, and problems with the system. They can be enabled or disabled (see “Options”). The following table describes status beep activity.

Note
You may receive a different number of status beeps if buttons are pressed quickly.

<table>
<thead>
<tr>
<th>Activity</th>
<th>Beep Response</th>
</tr>
</thead>
<tbody>
<tr>
<td>ARM Doors/Windows</td>
<td><strong>Exit delay</strong> and <strong>Entry delay</strong> beeps sound 2 times every 5 seconds and 2 times per second during the last 10 seconds (if Silent Exit is used, the Exit delay beeps will only sound twice when you arm and twice when the Exit delay expires)</td>
</tr>
<tr>
<td>ARM Motion Sensors</td>
<td><strong>Exit delay</strong> and <strong>Entry delay</strong> beeps sound 3 times every 5 seconds and 3 times per second during the last 10 seconds (if Silent Exit is used, the Exit delay beeps will only sound 3 times when you arm and 3 times when the Exit delay expires)</td>
</tr>
</tbody>
</table>

Status Beeps

<table>
<thead>
<tr>
<th>Activity</th>
<th>Beep Response</th>
</tr>
</thead>
<tbody>
<tr>
<td>ARM Doors/Windows</td>
<td><strong>Exit delay</strong> and <strong>Entry delay</strong> beeps sound 2 times every 5 seconds and 2 times per second during the last 10 seconds (if Silent Exit is used, the Exit delay beeps will only sound twice when you arm and twice when the Exit delay expires)</td>
</tr>
<tr>

</tr>
</tbody>
</table>

Alarm Sirens and Lamp Modules
Exterior and interior sirens make 3 different alarm sounds on the premises, each indicating a different type of alarm. Sirens are programmed by the installer to time-out and stop sounding after a specified time.

Use the following table to understand the siren sounds used by the security system. Temporal 3 refers to a continuous pattern of 3 siren pulses then off for 2 seconds, 3 siren pulses then off for 2 second.

<table>
<thead>
<tr>
<th>Alarm Type</th>
<th>Interior Siren Sound</th>
<th>Exterior Siren Sound</th>
<th>Lights</th>
</tr>
</thead>
<tbody>
<tr>
<td>Fire</td>
<td>Temporal 3</td>
<td>Temporal 3</td>

</table>

### Numeric Pager

You may program your security system to send a numeric message indicating system activities to your pager. The system will send the message twice. See “Programming Instructions.”

Use the following table to determine what the numeric message is reporting.

### Canceling Accidental Alarms

You may have up to 254 seconds (programmable by your installer) to cancel an accidental alarm. See your installer to find out what time is programmed. If the programmed time has passed, you must call the central monitoring station to cancel the alarm.

You have ___ seconds to cancel an accidental alarm.

To cancel an accidental alarm, simply enter your master access code.

### Guidelines for Preventing Accidental Alarms

The following guidelines will go a long way toward preventing accidental alarms.

- Close doors and windows before you leave your house.
- Gather your belongings, so you can exit immediately after arming the system.
- Always enter and exit within the programmed delay times.
- Make sure you leave through a door that has a delay time set for it.
- Disarm your system immediately upon returning home.
- Be aware of the devices in your security system and learn how each one operates.
- If you have pets, ask your installer if you need pet lenses in your motion detectors.
- Check the location of your smoke detectors. Smoke detectors near bathrooms and kitchens can be tripped by steam and smoke from cooking.
- Take note of system beeps, voice announcements and indicator lights which indicate the current system status.

### How to Use an Off-Site Phone

You may use an off-site phone to arm/disarm your panel, turn lights on and off, check system status, or conduct an audio session (ask your installer if you have this feature).

**How to gain access to the Control Panel:**

1. Call the panel and let the phone ring twice then hang up.
2. Wait at least 10 seconds and call the panel again. You may wait up to 40 seconds before calling again.
3. The panel should answer on the first ring. You won’t hear any prompt when the system answers.
4. Press the * button on your telephone and you will hear system activated.

At this point you may perform the actions listed in the following table of phone commands. CODE refers to the master and access codes programmed into your system.
If you are interactive with your panel and the panel hangs
up on you, the system is calling in a report to the central
monitoring station or a pager, due to an action made by
you or someone at the security system site.

How to Use Your Touchpads

Touchpads are used to control the security system from
any location within or near your home.

Remote Handheld Touchpad

Interfacing with the system using a Remote Handheld
Touchpad is similar to using the panel.

System Status

Press System Status once to hear
information about your system from
the panel. See “Status Beeps”.

ARM Doors & Windows

Press Arm Doors & Windows button
once to turn the security system
protection on for all protected doors
and windows.

Press twice to eliminate the pre-pro-
grammed entry delay.

ARM Motion Sensors

Press Arm Motion Sensors button
once to turn protection on for all
Motion Sensors. Use when no one is home. This is usually
used in combination with ARM Doors & Windows. Press
twice to activate the Latchkey feature.

Note
Depending upon how your dealer programmed your
panel, you may be required to enter your access
code to arm the system.

Disarm

Press Disarm button once and enter your access code
using the NUMERIC buttons to turn security protection
off. To subdisarm the system, enter the master access code.

Subdisarm

Enter your access code using the NUMERIC buttons while
the system is disarmed. Panel will announce, system dis-
armed. The Disarm button on the panel will begin to
blink.

Emergency

Press both EMERGENCY buttons for 3 seconds to cause
the system to call a central monitoring station to report a
non-medical emergency.

Keychain Touchpad

If your installer programmed the Key-
chain Touchpad with no entry delay, and
you armed the system with the Keychain
Touchpad, you must disarm your system
before entering the home to avoid caus-
ing an alarm.

If your installer programmed your system
for Remote Touchpad Arming, you must
enter your home to start the entry delay
before you can use your Keychain Touchpad to disarm the
system.

WARNING!
To avoid causing false alarms, check with your
installer on how your touchpad options are pro-
grammed.

LOCK
Press once to arm doors and windows.

LOCK
Press twice to arm doors, windows, and
Motion Sensors.

LOCK
Press 3 times to arm doors, windows,
Motion Sensors, and to activate the Latchkey
option.

LOCK and UNLOCK
Press both buttons simultaneously for 3 sec-
onds to send a panic (intrusion, silent, or
non-medical emergency) alarm to the cen-
tral monitoring station.

Note
Panic alarms need to be silenced from the panel, a
remote handheld touchpad or another keychain
touchpad. They cannot be silenced from the same
keychain that activated the alarm.

UNLOCK
Press to disarm your security system.

STAR
Can be programmed to control a device
connected to a universal module.

Note
For any keypress on the Keychain Touchpad, hold
the button until the indicator light blinks.

CODE = any access code
Programming Your System

The programming decals are visible when you open the panel cover (see Figure 1.). These decals are designed to make system programming easier for you. Always begin by entering your access code. Then, choose an operation from the START MENU. Follow the voice prompts and flow arrows to complete the desired task. Notice the button flow diagrams following the Instruction Summary.

Programming Instructions

Use the following instructions to access the programming buttons and programming decals.

1. System must be disarmed. Open the Panel Cover by pressing the plastic latch on the top of the panel.

   When you open the cover you will immediately be prompted by the panel voice to use the numbered keys to enter your ID.

   Option #16: Sensor Activated Light Lockout Start Time
   Option #37: Sensor Activated Light Lockout Stop Time
   Option #41: Chime Voice
   Option #42: Speaker Volume
   Option #43: Pager Phone Number
   Option #55: Status Beep Volume

   Press and follow voice prompts.

   * Press for program information.

   ** Press for program information.

   DONE

   Add Access Code

   Press and follow voice prompts.

   Add Access Code

   DONE

   Use red numbers to enter 4-digit code.

   Set Clock

   Press and follow voice prompts.

   Clock Set

   Hours

   Minutes

   DONE

   Note:

   Hold key or press repeatedly until you hear the desired item.

   Delete

   To delete an option or access code
   press and follow the voice prompting.

   Cancel

   If you make a mistake or want to cancel
   start over press

   Sensor or Phone Test

   To select a test, press and follow the voice prompting.

2. Enter the Master Access Code.

   Note

   The Master access code is 1-2-3-4 when the panel is shipped. You should change your Master Access Code after your system is installed (see “Access Code”).

3. The system voice will prompt you to begin with the START MENU.

   The START MENU includes the following buttons:

   - Add
   - Delete
   - Cancel
   - Test
   - Clock Set

   Press the appropriate button.
4. After pressing a button on the START MENU the system voice will prompt you to then use the MAIN MENU.

The MAIN MENU includes the following buttons:

- Light Control
- Option #
- Sensor/Remote
- Access Code

Press the appropriate button. Depending on the button you pressed, the system will prompt you to continue by pressing other buttons on the panel.

**Access Codes**

Your security system has a master access code, access codes 1-5, and a panic code used for arming and disarming the panel. The master code is used for disarming and programming your system. Access codes 1-5 are generally used for children or as temporary codes for a baby-sitter or service personnel. The panic code may be entered to arm, disarm or subdisarm the system in a non-medical emergency situation. The panel will call the central station with a panic alarm report, but there will be no indication of an alarm at the panel.

**Note**

Codes are always needed to disarm the system. Depending on the panel configuration, codes may be needed to arm the system.

Your system may be set up so that the master code or an access code is required when arming. If so, the panel will prompt you to enter a code when you attempt to arm the system.

**Note**

Because different codes can be entered using the same button presses you have to use caution when programming the panic code. You need to ensure that the panic code does not use the same button presses as other access codes. For example if the master code is 1234, do not program the panic code to be 2244. The panel would interpret these codes to be the same code.

**How to change an Access Code:**

1. Open the cover of the panel.
2. The panel voice prompts you to *Use numbered keys to enter ID. Enter your master access code* using the numbered keys.
3. The panel voice prompts you to *Please select from START MENU. Press the Add button* on the START MENU.
4. The panel voice prompts you to *Select from MAIN MENU. Press the Access Code button* on the MAIN MENU.
5. The panel voice responds with *Master Code, press again for next access code or DONE to select or CANCEL to quit.* Press the access code button again to hear the next access code. When you hear the access code you wish to change press the DONE Button.
6. Enter 3-6 new numbers using the numbered keys.
7. Close the panel cover.

**How to Delete an Access Code:**

1. Open the cover of the panel.
2. The panel voice prompts you to *Use numbered keys to enter ID. Enter your master access code* using the numbered keys.
3. The panel voice prompts you to *Please select from START MENU. Press the Delete button* on the START MENU.
4. The panel voice prompts you to *Select from MAIN MENU. Press the Access Code button* on the MAIN MENU.
5. The panel voice responds with *Access Code 1, press again for next access code or DONE to select or CANCEL to quit.* Press the access code button again to hear the next access code. When you hear the access code you wish to delete, press the DONE Button. The panel voice responds with *Access Code X deleted.*
6. Close the panel cover.

**Light Control**

Your system has the ability to control lights from the panel. A specific light or group of lights can be programmed to turn on and off at designated times.

**House Code**

Refers to a group of lights that can be controlled from the panel.

**Note**

The panel lists house codes A - O. Ask your installer what house code your lights are set up on.

**Unit Number**

Refers to a specific light within a house code.

**How to set time for light control:**

1. Open the cover of the panel.
2. The panel voice prompts you to *Use numbered keys to enter ID. Enter your master access code* using the numbered keys.
3. The panel voice prompts you to *Please select from START MENU. Press the Add button* on the START MENU.
4. The panel voice prompts you to *Select from MAIN MENU. Press the Access Code button* on the MAIN MENU.
4. The panel voice prompts you to select from MAIN MENU. Press the Light Control button on the MAIN MENU.

5. The panel voice responds with House Code is *, press again to change or press unit number. This is the House Code that was set by your installer. Don’t change it. Press the Unit # button.

6. The panel responds with Unit # press again to change or select from control menu. Keep pressing the Unit # button until the correct unit is selected.

7. Press the Time button on the control menu. The panel voice prompts you. On time is **** to change press hours and minutes then press done.

8. Press the Hours and Minutes buttons to set the correct on time.

9. Press Done. Panel will announce, Off time is **** to change press hours and minutes then press done.

10. Press the Hours and Minutes buttons to set the correct off time.

11. Press Done. Panel will announce the unit number with the on and off times you just programmed.

Programming Options
The following table is a list of options you can change.

</table>

* See “Option 43 - Pager Phone Number”

When entering a single digit option number (1-9), you must type a zero before the number (i.e. 01, 02, ....). All option numbers must be 2 digits.

Option 01 - Status Beeps
Add this option to enable panel beeps. Status beeps are any beeps (including chime beeps) that come from the panel. See “Status Beeps”.

1. Open panel cover. Panel announces, Use numbered keys to enter ID.
2. Enter Access Code using the numbered keys. Panel announces, Please select from Start Menu.
3. Press Add from the Start menu. Panel announces, Select from main menu.
4. Press Option #. Panel announces, Option 1, press again for next option or done to select.
5. Press DONE. Panel announces, Option 1 is on.

Delete turns off panel piezo beeps.

1. Open panel cover. Panel announces, Use numbered keys to enter ID.
2. Enter Access Code using the numbered keys. Panel announces, Please select from Start Menu.
3. Press Delete from the Start menu. Panel announces, Select from main menu.
4. Press Option #. Panel announces, Option 1, press again for next option or done to select.
5. Press DONE. Panel announces, Option 1 deleted.

Option 02 - Panel Voice
Panel Voice may be disabled, except for status messages, open sensor responses, and when in program mode.

Add enables the panel voice.

1. Open panel cover. Panel announces, Use numbered keys to enter ID.
2. Enter Access Code using the numbered keys. Panel announces, Please select from Start Menu.
3. Press Add from the Start menu. Panel announces, Select from main menu.
4. Press Option #. Panel announces, Option 1, press again for next option or done to select.
5. Press DONE. Panel announces, Option 1 is on.

Delete disables the panel voice.

1. Open panel cover. Panel announces, Use numbered keys to enter ID.
2. Enter Access Code using the numbered keys. Panel announces, Please select from Start Menu.
3. Press Delete from the Start menu. Panel announces, Select from main menu.
3. Press Option #. Panel announces, Option 1, press again for next option or done to select.

4. Press Option #. Panel announces, Option 1, press again for next option or done to select.

5. Press 02. Panel announces, Option 2 press again for next option or done to select.

6. Press DONE. Panel announces, Option 2 deleted.

Note
The system clock must be set for Latchkey to function.

Option 03 - Latchkey Time
Adding this option allows you to program Latchkey Time. Latchkey is used to notify parents if children do not arrive home and disarm the system at a predetermined time.

Note
The system clock must be set for Latchkey to function.

1. Open panel cover. Panel announces, Use numbered keys to enter ID.

2. Enter Access Code using the numbered keys. Panel announces, Please select from Start Menu.

3. Press Add from the Start menu. Panel announces, Select from main menu

4. Press Option #. Panel announces, Option 1, press again for next option or done to select.

5. Press 03. Panel announces, Option 3, press again for next option or set latchkey hours and minutes, then press done.

6. Press Hours and Minutes to set the time.

7. Press DONE. Panel will announce Latchkey time that has been set.

Delete turns off this option and Latchkey cannot be enabled when the panel is armed.

1. Open panel cover. Panel announces, Use numbered keys to enter ID.

2. Enter Access Code using the numbered keys. Panel announces, Please select from Start Menu.

3. Press Delete from the Start menu. Panel announces, Select from main menu

4. Press Option #. Panel announces, Option 1, press again for next option or done to select.

5. Press 03. Panel announces, Option 3, press again for next option or done to delete.

6. Press DONE. Panel announces, Option 3 deleted.

Option 36 and 37- Sensor Activated Light Lockout Start and Stop Times
Adding these options lets you control when sensor activated lights are active. The panel will not turn on a light between the programmed start time (option 36) and the programmed stop time (option 37), even if sensor activated lights are on. Both options must be programmed for this option to work correctly.

For example, if you don't want sensor activated lights to be active during daylight hours, set the lockout start time to begin at dawn and set the stop time (option 37) to coincide with sunset.

Option 36: Sensor Activated Light Lockout Start Time
Add enables sensor activated light lockout start time (midnight to 11:59 P.M.).

1. Open panel cover. Panel announces, Use numbered keys to enter ID.

2. Enter Access Code using the numbered keys. Panel announces, Please select from Start Menu.

3. Press Add from the Start menu. Panel announces, Select from main menu

4. Press Option #. Panel announces, Option 1, press again for next option or done to select.

5. Press 36. Panel announces, Option 36, press again for next option or set hours and minutes, then press done.

6. Press Hours and Minutes to set the time.

7. Press DONE. Panel announces the time that has been set.

Delete disables sensor activated light lockout start time. The panel will turn on a light activated by a sensor, if sensor activated lights are enabled.

1. Open panel cover. Panel announces, Use numbered keys to enter ID.

2. Enter Access Code using the numbered keys. Panel announces, Please select from Start Menu.

3. Press Delete from the Start menu. Panel announces, Option 1, press again for next option or done to select.

4. Press Option #. Panel announces, Option 1, press again for next option or done to select.

5. Press 36. Panel announces, Option 36, press again for next option or done to delete.

6. Press DONE. Panel announces, Option 36 deleted.

Option 37: Sensor Activated Light Lockout Stop Time
Add enables sensor activated light lockout stop time (midnight to 11:59 P.M.).

1. Open panel cover. Panel announces, Use numbered keys to enter ID.

2. Enter Access Code using the numbered keys. Panel announces, Please select from Start Menu.

3. Press Add from the Start menu. Panel announces, Select from main menu

4. Press Option #. Panel announces, Option 1, press again for next option or done to select.

5. Press 37. Panel announces, Option 37, press again for next option or set hours and minutes, then press done.

6. Press Hours and Minutes to set the time.

7. Press DONE. Panel announces the time that has been set.

Delete disables sensor activated light lockout stop time. The panel will turn on a light activated by a sensor at all times if sensor activated lights are enabled.
1. Open panel cover. Panel announces, *Use numbered keys to enter ID.*

3. Press **Delete** from the Start menu. Panel announces, *Select from main menu*

4. Press **Option #**. Panel announces, *Option 1, press again for next option or done to select*

5. Press **37**, *Option 37, press again for next option or done to delete*

**Option 41 - Voice Chime**
The panel will verbally announce which chime sensor has been tripped if the chime feature is on.

**Add** enables chime voice.

1. Open panel cover. Panel announces, *Use numbered keys to enter ID.*

3. Press **Add** from the Start menu. Panel announces, *Select from main menu*

4. Press **Option #**. Panel announces, *Option 1, press again for next option or done to select*

5. Press **41**, *Option 41, press again for next option or done to select*

6. Press **DONE**. Panel announces, *Option 41 is on.*

**Delete** disables chime voice. The panel will not announce which chime sensor has been tripped but will still chime 2 times for doors and 3 times for motion sensors when a given sensor is tripped.

1. Open panel cover. Panel announces, *Use numbered keys to enter ID.*

3. Press **Delete** from the Start menu. Panel announces, *Select from main menu*

4. Press **Option #**. Panel announces, *Option 1, press again for next option or done to select*

5. Press **41**, *Option 41, press again for next option or done to delete*

**Option 42 - Speaker Level**
When this option is turned on you can set the panel speaker level from 1 (the lowest voice level) to 8 (the highest voice level). When you turn this option off, the speaker level is set to 8 (the highest voice level).

**Add** allows you to set the speaker level from 1-8.

1. Open panel cover. Panel announces, *Use numbered keys to enter ID.*

3. Press **Add** from the Start menu. Panel announces, *Select from main menu*

4. Press **Option #**. Panel announces, *Option 1, press again for next option or done to select*

5. Press **42**, *Panel announces, Option 42, press again for next option or use numbered keys to enter option*

6. Enter the voice level (1 - 8) with the numbered keys.

7. Panel announces the speaker level that has been selected

**Delete** sets the speaker level to 8 (the highest voice level).

1. Open panel cover. Panel announces, *Use numbered keys to enter ID.*

3. Press **Delete** from the Start menu. Panel announces, *Select from main menu*

4. Press **Option #**. Panel announces, *Option 1, press again for next option or done to select*

5. Press **42**, *Panel announces, Option 42, press again for next option or done to delete*

**Option 43 - Pager Phone Number**
**Add** enables the pager phone number and allows you to program up to 26 digits, including pauses.

Add 3 or 4 pauses to the end of the phone number to ensure the complete pager message will be received. Press the Test button to program a pause into the phone number.

1. Open panel cover. Panel announces, *Use numbered keys to enter ID.*

3. Press **Add** from the Start menu. Panel announces, *Select from main menu*

4. Press **Option #**. Panel announces, *Option 1, press again for next option or done to select*

5. Press **43**, *Panel announces, Option 43, press again for next option or use numbered keys to enter phone number, then press done*

6. **Enter a phone number** with the numbered keys. Press Test to enter a pause in the phone number, press **Add** to enter a “*”, and press **Delete** to enter a “#”. Panel announces each number selected.

**Note**
The phone number is automatically stored after you’ve pressed 26 digits. You will not have to press DONE to store the number. If the number is less than 26 digits, then DONE must be pressed.

7. Press **DONE**. Panel confirms entered phone number.

**Delete** disables the pager phone number. The phone number will not be called in an alarm situation.
1. Open panel cover. Panel announces, *Use numbered keys to enter ID.*
4. Press Option #. Panel announces, *Option 1, press again for next option or done to select.*
5. Press 43. Panel announces, *Option 43, press again for next option or done to delete.*

The panel will call the pager to indicate the following:

- **No activity** - A no activity alarm is called in if the programmed amount of time passes, and no activity has occurred on your system. Examples of such are: the panel is not subdisarmed, disarmed, sensors armed, a key has not been pressed or a sensor has not been tripped. Tripping of non-intrusion chime sensors is not considered activity. The no activity time period is programmed by your installer.

- **Latchkey** - A latchkey report is called when the system is not disarmed by a predetermined time. The latchkey time is programmed by the user (Option 03). Latchkey must be enabled when arming.

- **Phone Test** - A phone test report is called in when a phone test has been performed.

- **Disarming** - A disarming report is called in when the system is disarmed. This option is programmed by your installer.

- **Arming** - An arming report is called in when the system is armed. This option is programmed by your installer.

- **Fail to Disarm** - A fail to disarm report is called in when the system is not disarmed by the time programmed by the installer.

- **Fail to Arm** - A fail to arm report is called in when the system is not armed by the time programmed by the installer.

- **AC Power Failures** - An AC power failure is called in after loss of power. To avoid false alarms, your installer has programmed the panel to wait at least a few minutes (or up to several hours) before calling in.

- **AC Power Restore** - A restore will be reported when power is restored.

- **Alarms** - Alarm reports include: Emergency, Intrusion, and Fire.

**Option 55: Status Sounds**

Add allows you to set the volume for status sounds, such as arming beeps, trouble beeps, and status beeps. The lowest volume setting is 1, the highest is 10.

1. Open panel cover. Panel announces, *Use numbered keys to enter ID.*
4. Press Option #. Panel announces, *Option 1, press again for next option or done to select.*
5. Press 55. Panel announces, *Option 55, press again for next option or done to select.*
6. Use the numbered keys to enter the desired volume setting (01-10).
7. Press DONE.

Delete sets the volume of status sounds to the default setting (7).

1. Open panel cover. Panel announces, *Use numbered keys to enter ID.*
4. Press Option #. Panel announces, *Option 1, press again for next option or done to select.*
5. Press 55.
6. Press DONE.

**Trouble Beeps**

Your security system is able to automatically test itself for:

- Power failures
- Low batteries
- Non-working sensors
- Communication troubles with the Central Monitoring Station

When your security system detects one of the problems above, six rapid beeps sound every minute, until the trouble condition is corrected.

**Silencing Trouble Beeps**

To stop the trouble beeps, press the SYSTEM STATUS button or arm/disarm the system while the trouble condition exists. Trouble beeps will begin 4 hours later, unless the trouble condition is corrected.

**AC Power Failure**

This condition occurs if your security system has been accidentally unplugged or if there has been an AC power outage. The backup battery will take over. If AC power is not restored within 15 seconds, the panel will go dark and alert you with trouble beeps. If you press any button, the display will light and pressing SYSTEM STATUS will confirm the AC power failure. If AC power is not restored within a programmed period of time (5-254 minutes) the system will call the central monitoring station (if programmed by installer). The backup battery, if fully charged, will last for 18 - 24 hours with no AC power.
System Battery Failure
This condition occurs if the emergency backup battery has failed. Status beeps will start and the SYSTEM STATUS button will light. Press the SYSTEM STATUS button to hear the trouble message. If your AC power is not working, your security system will shut down once the battery has failed. If the condition does not clear after AC power has been restored and 24 hours have passed, call your security system dealer.

Sensor Failure
This condition occurs if a sensor is not communicating with the panel. Status beeps will start and the SYSTEM STATUS button will light. Press the SYSTEM STATUS button to hear which sensor(s) failed. Perform sensor tests. It may be necessary for you to call your security system dealer if the problem continues.

Sensor Low Battery
This condition occurs if a system sensor has a low battery. The sensor may still be communicating with the panel. Status beeps will start and the SYSTEM STATUS button will light. Press the SYSTEM STATUS button to hear which sensor has a low battery. It may be necessary for you to call your security system dealer to resolve this problem. Some sensor batteries can be replaced by the homeowner.

Fail-To-Communicate
This condition occurs if your security system cannot communicate to the central monitoring station. Your system will try to report to the central monitoring station 8 times before it tells you there is a Fail-To-Communicate problem. Status beeps will start and the System Status button will light. Press the System Status button to hear the trouble message. It may be necessary for you to call your security system dealer if the problem continues.

Sensor Open
This condition occurs if a door or window is open, a system sensor has been disturbed or tampered and not reset properly. For example, a Motion Sensor may be off the wall or a Door/Window Sensor cover may have been removed from the sensor. Your system will indicate this condition to you by causing the System Status button to light. When you press this button, the system responds with Sensor # Name open. Correct the problem by reset-ting the sensor. If this condition continues, call your security system dealer.

Sensor Tampered
This condition occurs when a sensor is physically tampered with. If the system is armed an alarm will occur. For example, the cover is taken off of one of the sensors. Your system will indicate this condition to you by causing the System Status button to light. When you press this button, the system responds with Sensor # Name tampered. Correct the problem by resetting the sensor. If this condition continues, call your security system dealer.

Option 50 Detected
The panel receiver may be experiencing some interference. The system will call to notify the central monitoring station about this problem.

Siren 1 or 2 Failure
Call your security system dealer.

System Access Alarm
The panel cover was opened while the system was armed. The system will call the central monitoring station to report a tamper alarm.

Clearing System Status
Press the SYSTEM STATUS button, listen to the status message, then disarm the system to clear system status. If the trouble condition was a low CPU battery, perform a sensor test. The SYSTEM STATUS button should turn off if all trouble conditions have been corrected.

Testing
As an added safeguard, there are system tests you should do yourself on a regular basis. It is recommended that you test your system weekly.

Testing Sensors
You can test sensors one at a time to make sure they are sending strong signals to the panel. You should test the security system at least once a week.

To perform the sensor test:
1. Open the panel Cover.
2. Enter the master access code.
3. Press the Test button once. The panel will announce Sensor Test.
4. Press the DONE button.

The panel will voice prompt you with a list of your programmed sensors that you need to test. The panel will start with sensor 1 and announce Test sensor 1, sensor name.

When you trip a sensor and it communicates successfully it will be removed from the list. You may trip the sensors in any order. The sensor test has a 4 minute time-out that resets with each sensor trip.

After all sensors have been successfully tested, the panel will announce Sensor test complete, press DONE. Press DONE. The panel will announce Sensor test ok.

If any of the sensors did not test successfully and you want to terminate the test, press DONE or Cancel. The panel will announce Sensor test canceled or failure. If a sensor test fails, call your security dealer.

Use the following table to trip devices:
Testing Communication
Communication between your system, the central monitoring station and your pager should be tested at least once per week to make sure you have the proper telephone connection.

To perform a phone test:
1. Open the panel cover.
2. Enter the master access code.
3. Press the Test button twice. The panel will announce Phone test, press again to change or done to select.
4. Press the DONE button.

The panel will announce Phone test is on twice. If the test is successful, the panel will announce Phone test is on three times if you have a pager. If the phone test to the pager was successful, your pager will display -101-101. If the test is unsuccessful, the SYSTEM STATUS button will light and within 10 minutes the panel will announce Phone communication failure. If a phone test fails, call your security system dealer.

Note
If your system is not connected to a central monitoring station and you don’t use a pager, you won’t be able to perform the phone test.

Setting the Clock
If the panel loses power, the clock must be set. The default setting is 12 hour mode. Your installer can set the clock to 24 hour mode if you wish.

1. Open the panel cover. Panel announces, Use numbered keys to enter ID.
2. Enter the master access code. Panel announces, Please select from Start Menu.
3. Press Clock Set from the Start Menu. Panel announces, Time is ****, to change press hours and minutes, then press done.
4. Follow the arrow from the Clock Set button to the Hours keys.
5. Press the Hours +/- keys and listen to the voice prompts. Stop when panel voice announces the correct hour.
6. Press the Minutes +/- keys and listen to the voice prompts. Stop when the panel announces the correct minutes.
7. Press Done. The panel will announce the set time.
8. Close the cover.

Alarm System Limitations
Not even the most advanced alarm system can guarantee protection against burglary, fire, or environmental problems.

All alarm systems are subject to possible compromise or failure-to-warn for a variety of reasons.

- If sirens are not placed within hearing range of persons sleeping, in remote parts of the premises, or if they are placed behind doors or other obstacles.
- If intruders gain access through unprotected points of entry or areas where sensors have been bypassed.
- If intruders have the technical means of bypassing, jamming, or disconnecting all or part of the system.
- If power to sensors is inadequate or disconnected.
- If freeze or any environmental sensors are not located in areas where the appropriate condition can be detected.
- If smoke does not reach a Smoke Sensor. For example, Smoke Sensors cannot detect smoke in chimneys, walls, roofs, or smoke blocked by a closed door. Sensors may not detect smoke in other levels of the building. Sensors may not warn in time when fires are caused by smoking in bed, explosions, improper storage of flammables, overloaded electrical circuits, or other hazardous conditions.

<td>Press and hold the 2 EMERGENCY buttons simultaneously for 3 seconds.</td>
</tr>
</tbody>
</table>
If telephone lines are out of service.

Inadequate maintenance is the most common cause of alarm failure. Therefore, test your system at least once per week to be sure sensors, sirens, and phone communications are all working correctly.

Although having an alarm system may make you eligible for reduced insurance premiums, the system is no substitute for insurance.

**WARNING!** Security system devices cannot compensate you for the loss of life or property.

**Service**

If you have any questions about your security system or if you ever need service, please contact your security consultant.

- Your Floor Plan

**Emergency Planning**

Since an emergency is always unexpected, you should develop plans to help prepare for a variety of emergency situations. Periodically discuss and rehearse emergency plans to include the following:

- Understand how to use your security system
- Know the normal state of doors and windows; open, closed, or locked.
- Escape fast! (Do not stop to pack.)
- Use a different escape route if closed doors feel hot to the touch.
- Crawl and hold your breath as much as possible to help reduce smoke inhalation during your escape.
- Meet at a designated outdoor location.
- Emphasize that no one should return to the premises if there is a fire.
- Notify the fire department from a neighbor’s phone.
- Emphasize that no one should enter the premises if they hear sirens in the house.
- If you arrive at the premises and hear sirens, do not enter. Call for emergency assistance from a neighbor’s phone.

**Your Floor Plan**

Use the following guidelines when drawing your floor plan (use the next page to draw your floor plan):

- Show all building levels.
- Show exits from each room (two exits per room are recommended).
- Show the location of all security system components.
- Show the location of any fire extinguishers.
## Quick Reference Table

<table>
<thead>
